DD/A/ODP WEEKLY REPORT

Week of 22-29 July 1981

I. Major Activities During the Past Week

A. Support to DDO:

25X1 PEGASUS (Minicomputer Database on Terrorist Events) All software has been installed, tested, and documented. Presently, the PDP minicomputer is providing online support to users at Ft. Bragg, DIA, State, and Army. Installations are imminent at DOE and NSA. [REDACTED]

B. Support to PTO:

25X1 CAMS (COMIREX Automated Management System) A demonstration of the interactive graphics system (CAMSTACK) was presented to the Director of the White House Office of Planning and Evaluation and to the Deputy Director of the National Telecommunications and Information Administration. The demonstration was well received. [REDACTED]

C. Support to OSWR:

AIRDEFENSE. The CDC-to-IBM FORTRAN conversion program was used in production to convert an ESP-SW program of 8000 lines of code. The program was compiled successfully after conversion, but some manual conversion is still required. It is planned to continue testing on other CDC programs before releasing the convertor to the Federal Conversion Support Center, who will provide the program to other federal users through NTIS. [REDACTED]

D. Support to ODP:

FETTL (Applications Productivity Improvement) An ongoing effort between ODP/B Div and OL/P&PD to produce computer output microfilm from VM SCRIPT files has reached its first milestone. OL/P&PD has produced microfiche from tapes of VM SCRIPT files generated through the use of the CMS dump command. [REDACTED]
